

## **“Experiment 1.3”**

Student Name: **SUMIT KUMAR**

Branch: **CSE**

Semester: **5**

Subject Name: **Design and Analysis of Algorithms Lab**

UID: **20BCS8226**

Section/Group: **808-A**

Date of Performance: **18-08-22**

Subject Code: **20CSP-312**

### **1. Aim/Overview of the practical:**

In  $O(n)$  time complexity, find the frequency of elements in a given array.

### **2. Algorithm/Flowchart (For programming based labs):**

Step 1: Input the number of elements of an array.

Step 2: Input the array elements.

Step 3: Create another array to store the frequency of elements.

Step 4: Traverse the input array and update the count of the elements in the frequency array.

Step 5: Print the frequency array which displays the frequency of all the elements of the array.

### **3. Steps for experiment/practical/Code:**

---

// SUMIT KUMAR

// 20BCS8226

```
#include <bits/stdc++.h>
```

```
using namespace std;
```

```
void countFreq(int arr[], int n)
```

```
{
```

```
    // Mark all array elements as not visited
```

```
    vector<bool> visited(n, false);
```

```
    // Traverse through array elements and
```

```
    // count frequencies
```

```
    for (int i = 0; i < n; i++) {
```

```
        // Skip this element if already processed
```

```
        if (visited[i] == true)
```

```
            continue;
```

```
        // Count frequency
```

```
        int count = 1;
```

```
        for (int j = i + 1; j < n; j++) {
```

```
            if (arr[i] == arr[j]) {
```

```
                visited[j] = true;
```

```
                count++;
```

```
            }
```

```
        }
```

```
        cout<<"Frequency of "<<arr[i]<< " is : "<<count<<endl;
```

```
    }
```

```
}
```

```
int main()
```

```
{
```

```
    int arr[] = { 7, 7, 4, 5, 6, 5, 4, 4, 3, 1, 2, 1};
```

```
    int n = sizeof(arr) / sizeof(arr[0]);
```

```
countFreq(arr, n);
```

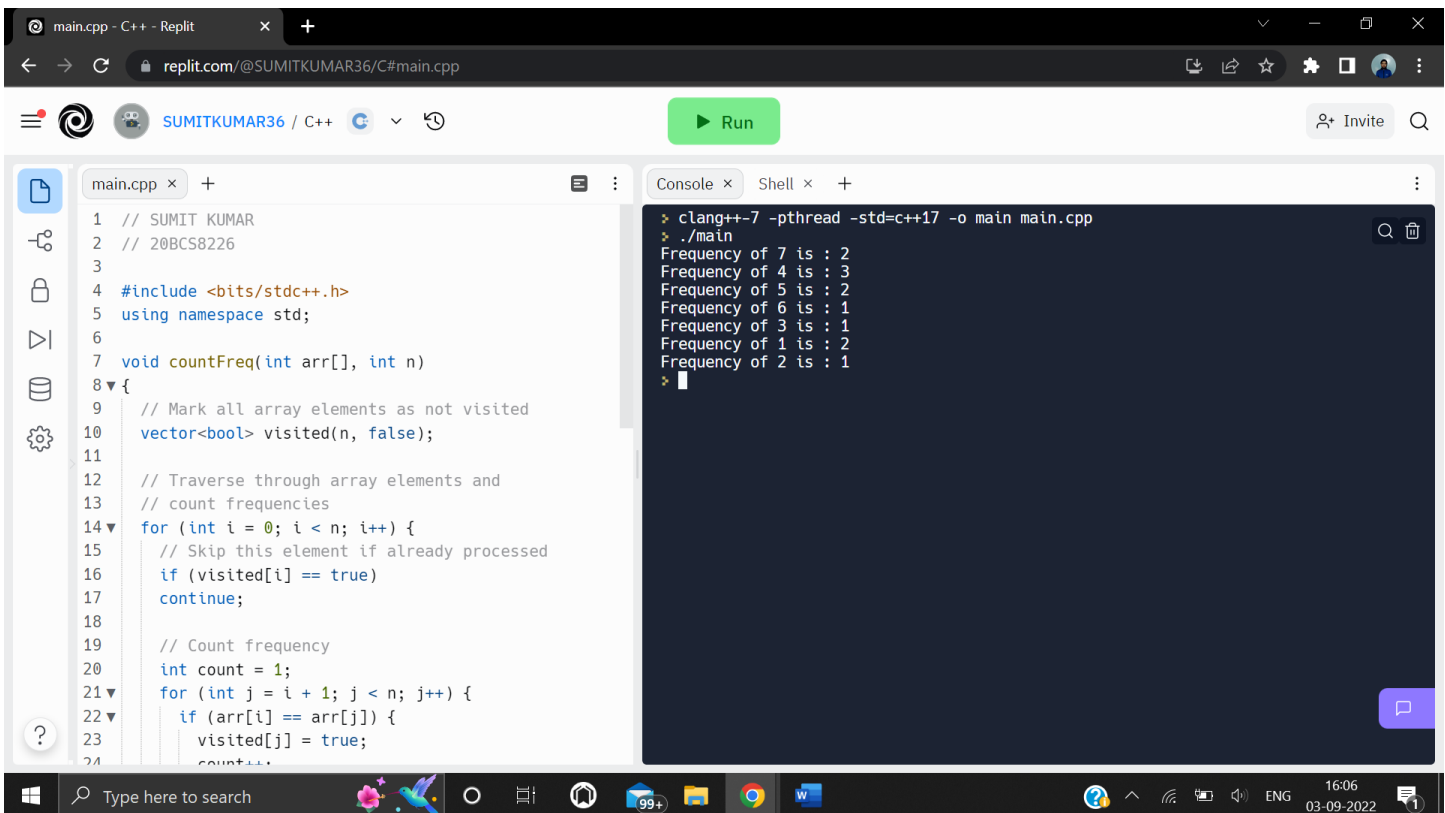

```
return 0;
```

```
}
```

#### 4. Observations/Discussions/ Complexity Analysis:

This approach will result in linear complexity, i.e.,  $O(n)$  time complexity. Here,  $n$  is the number of elements present in the given array.

#### 5. Result/Output/Writing Summary:

```
main.cpp - C++ - Replit
replit.com/@SUMITKUMAR36/C#main.cpp

SUMITKUMAR36 / C++

Run

main.cpp
1 // SUMIT KUMAR
2 // 20BCS8226
3
4 #include <bits/stdc++.h>
5 using namespace std;
6
7 void countFreq(int arr[], int n)
8 {
9     // Mark all array elements as not visited
10    vector<bool> visited(n, false);
11
12    // Traverse through array elements and
13    // count frequencies
14    for (int i = 0; i < n; i++) {
15        // Skip this element if already processed
16        if (visited[i] == true)
17            continue;
18
19        // Count frequency
20        int count = 1;
21        for (int j = i + 1; j < n; j++) {
22            if (arr[i] == arr[j]) {
23                visited[j] = true;
24                count++;
25            }
26        }
27        cout << "Frequency of " << arr[i] << " is : " << count << endl;
28    }
29 }
30
31 int main()
32 {
33     int arr[] = {7, 4, 5, 6, 3, 1, 2};
34     int n = sizeof(arr) / sizeof(arr[0]);
35     countFreq(arr, n);
36     return 0;
37 }
```

```
clang++-7 -pthread -std=c++17 -o main main.cpp
./main
Frequency of 7 is : 2
Frequency of 4 is : 3
Frequency of 5 is : 2
Frequency of 6 is : 1
Frequency of 3 is : 1
Frequency of 1 is : 2
Frequency of 2 is : 1
```

**Learning outcomes (What I have learnt):**

1. Learnt about a way of calculating frequency of each element.
2. Learnt how to implement know frequency in linear time complexity.
3. Learnt faster method of calculating frequency of elements in an array.

**Evaluation Grid (To be created as per the SOP and Assessment guidelines by the faculty):**

Sr. No.	Parameters	Marks Obtained	Maximum Marks
1.			
2.			
3.
